

## Power Glass® Graphic Display

Trendsetting communication technology for the public space – Power Glass® Graphic Display. Freely programmable writings and signs are displayed on both sides of the glass panel in a matter of seconds. Each of the light emitting diodes (LEDs), integrated into the laminated glass with light radiating on both sides, can be controlled with a PC. Current text, messages or indications can be displayed by using various fonts and symbols. Fast, direct and simple in communication and information. Eye-catching and convincing. Premium quality in design and manufacturing. Power Glass® Graphic Display – the unique high-tech product allowing for a wide range of applications and possibilities.

### Application Possibilities of Power Glass® Graphic Display

Eye-catching in all public buildings such as hotels, bank buildings, shopping malls, airports, train stations or cruise ships. As direction sign, news ticker, medium for direct and individual messages. Perceivable from both sides.
